

A Study on Characteristics of
Anxiety and Misophonia

Is your child ages 8 to 17 years old?

Is your child experiencing impairing anxiety?

Baylor College of Medicine is conducting research on the symptomatic presentation and characteristics of children and adolescents with misophonia or anxiety problems.

Eligible participants will participate in online assessment sessions and two optional follow-up surveys at months 3 and 6.

You will receive \$90 compensation (\$30 parent and \$60 child) for the online assessment sessions and \$15 compensation for completion of each of the two follow-up surveys.

For more details, please contact Jane Clinger at misophonia@bcm.edu or 713-798-1916
