

Agency & Mental Health

The purpose of this study is to more deeply understand agency, or the ability for an individual to think, choose, and act freely. The goal is to characterize the effects of different neuropsychiatric conditions on individuals' agency so we can help patients make more informed decisions about treatments.

Your responses will help us to create a test that can be used to track how patients' agency changes (either improves or gets worse) and how it is affected by different treatment options.

To thank you for their time, you will have the option to be entered into a monthly raffle for a \$150 Amazon gift card.

Who can participate?

Individuals 18 or older, with no history of dementia, recent diagnosis of a reading disability, at least an 8th grade English reading level, and no intellectual disability.

What will be asked of me?

You will fill out an online survey with approximately 170-200 questions, it will take about 35-45 minutes.

How do I participate?

You can point the camera on your mobile phone at this QR code to open the survey:

Or, you can:

1. Send an email to Ashley Walton at:

AgencyLabProject1@dartmouth.edu

2. You will receive a reply email that includes the link to the online survey.

**The information collected will be maintained anonymously, and cannot be linked back to you.*
